

Resource item

Resource items represent specific objects within a collection, such as users, stores, or networks. They provide contextual information on the resource and can allow users to click on it to navigate to this resource or select it.

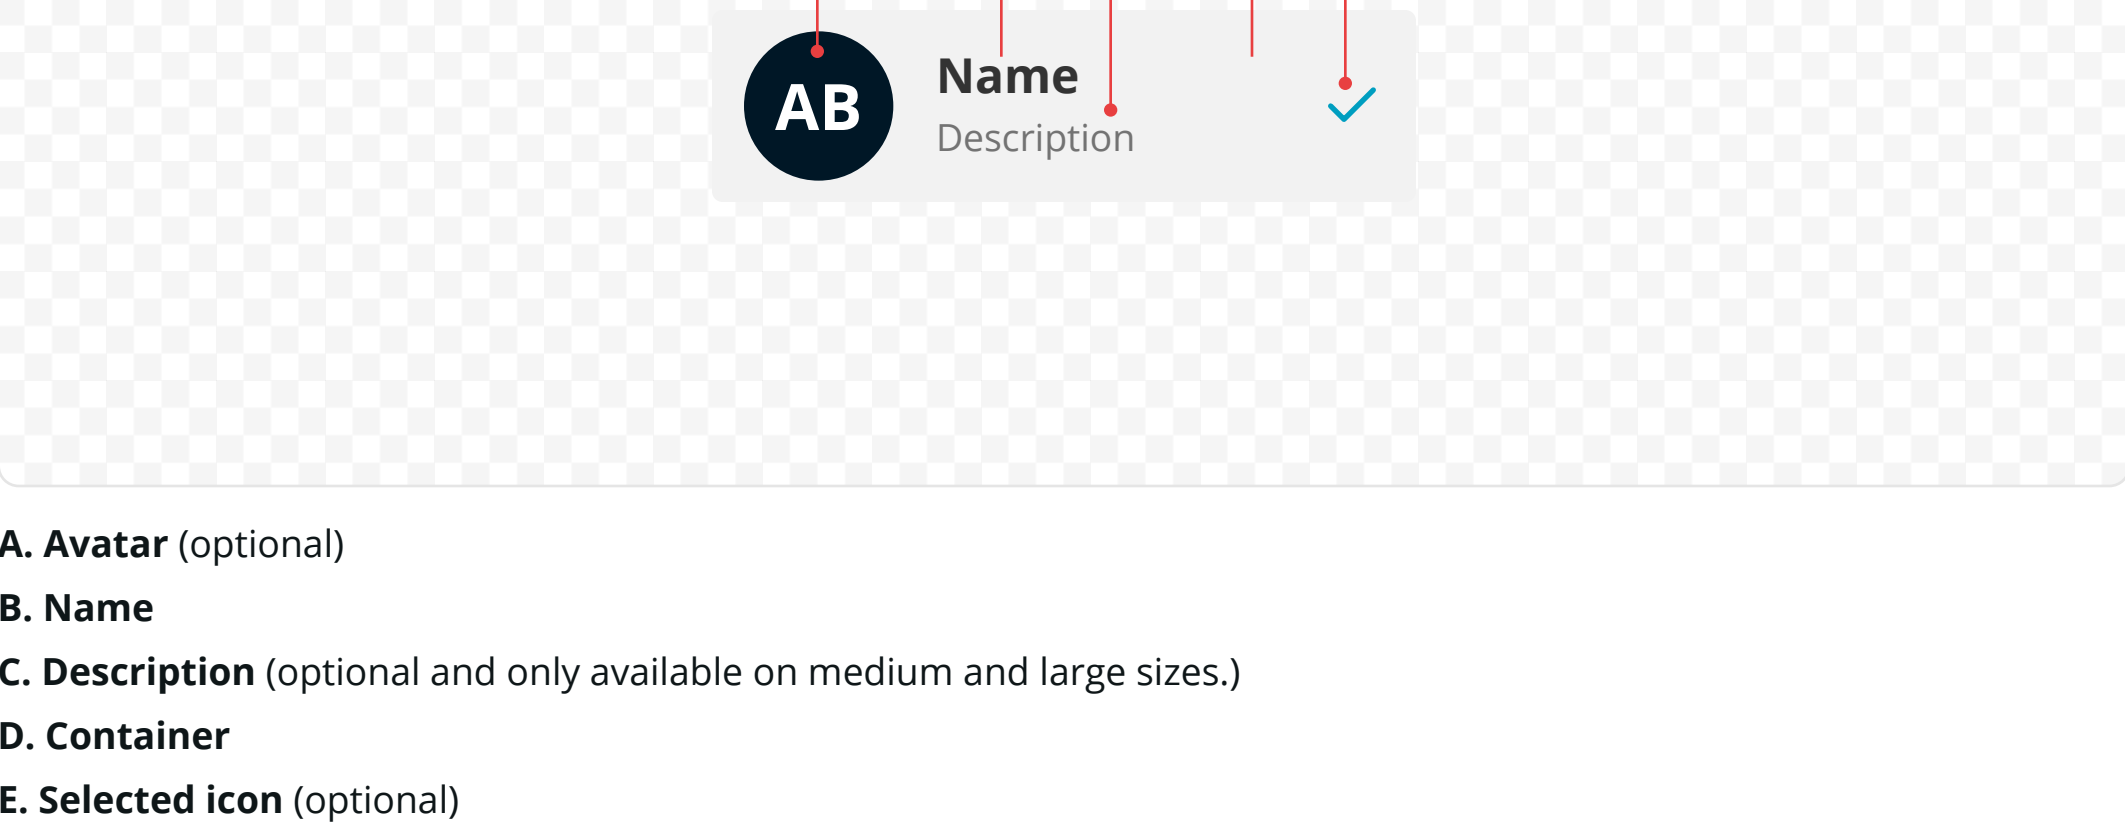

When to use

Use Resource items to display a succinct list of users or objects.

When not to use

Do not use this component if the content is not a user, an object or an element that is interactive.

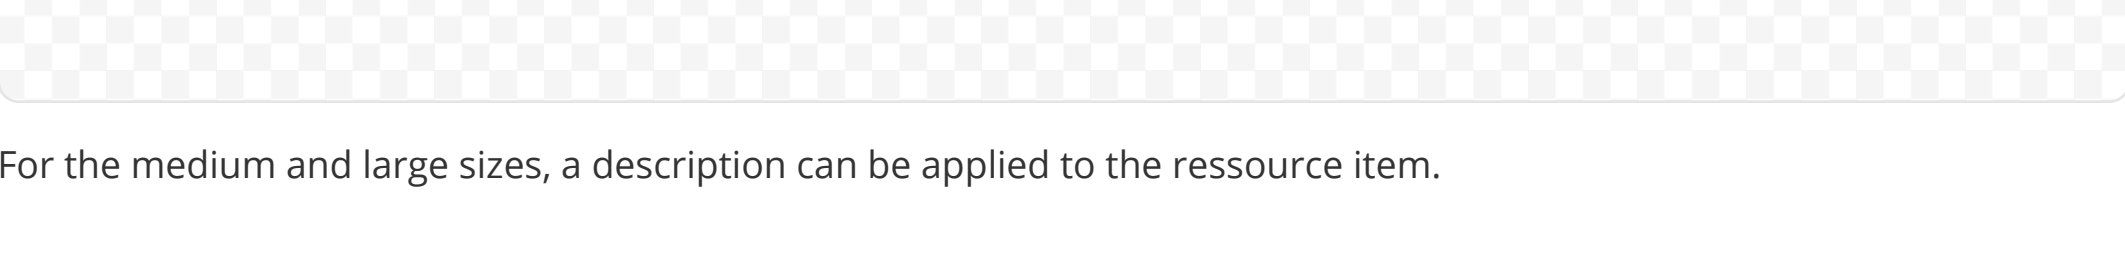

Anatomy

- A. Avatar (optional)
- B. Name
- C. Description (optional and only available on medium and large sizes.)
- D. Container
- E. Selected icon (optional)

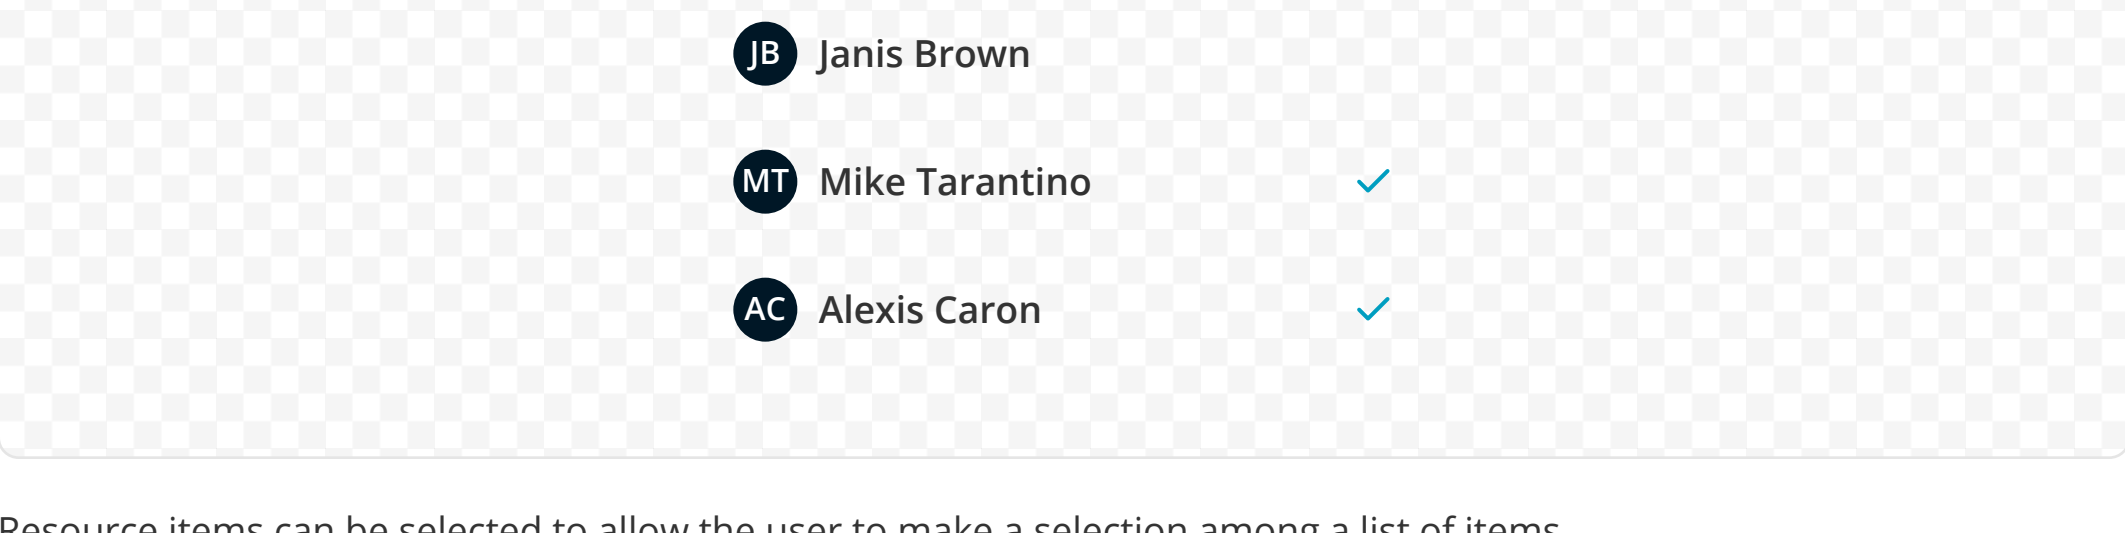

Variants

With description

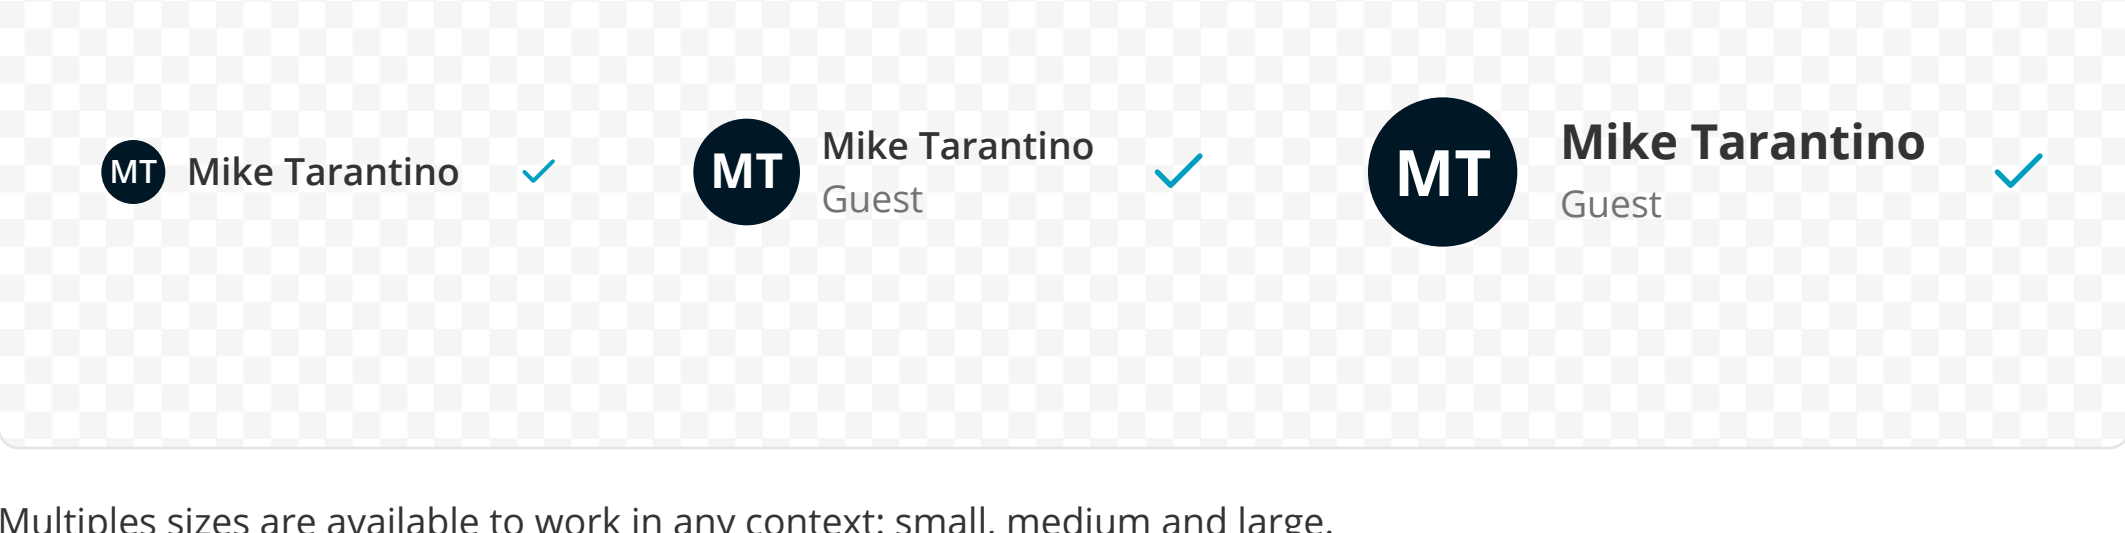

For the medium and large sizes, a description can be applied to the ressource item.

Selectable

Resource items can be selected to allow the user to make a selection among a list of items.

Sizes

Multiples sizes are available to work in any context: small, medium and large.

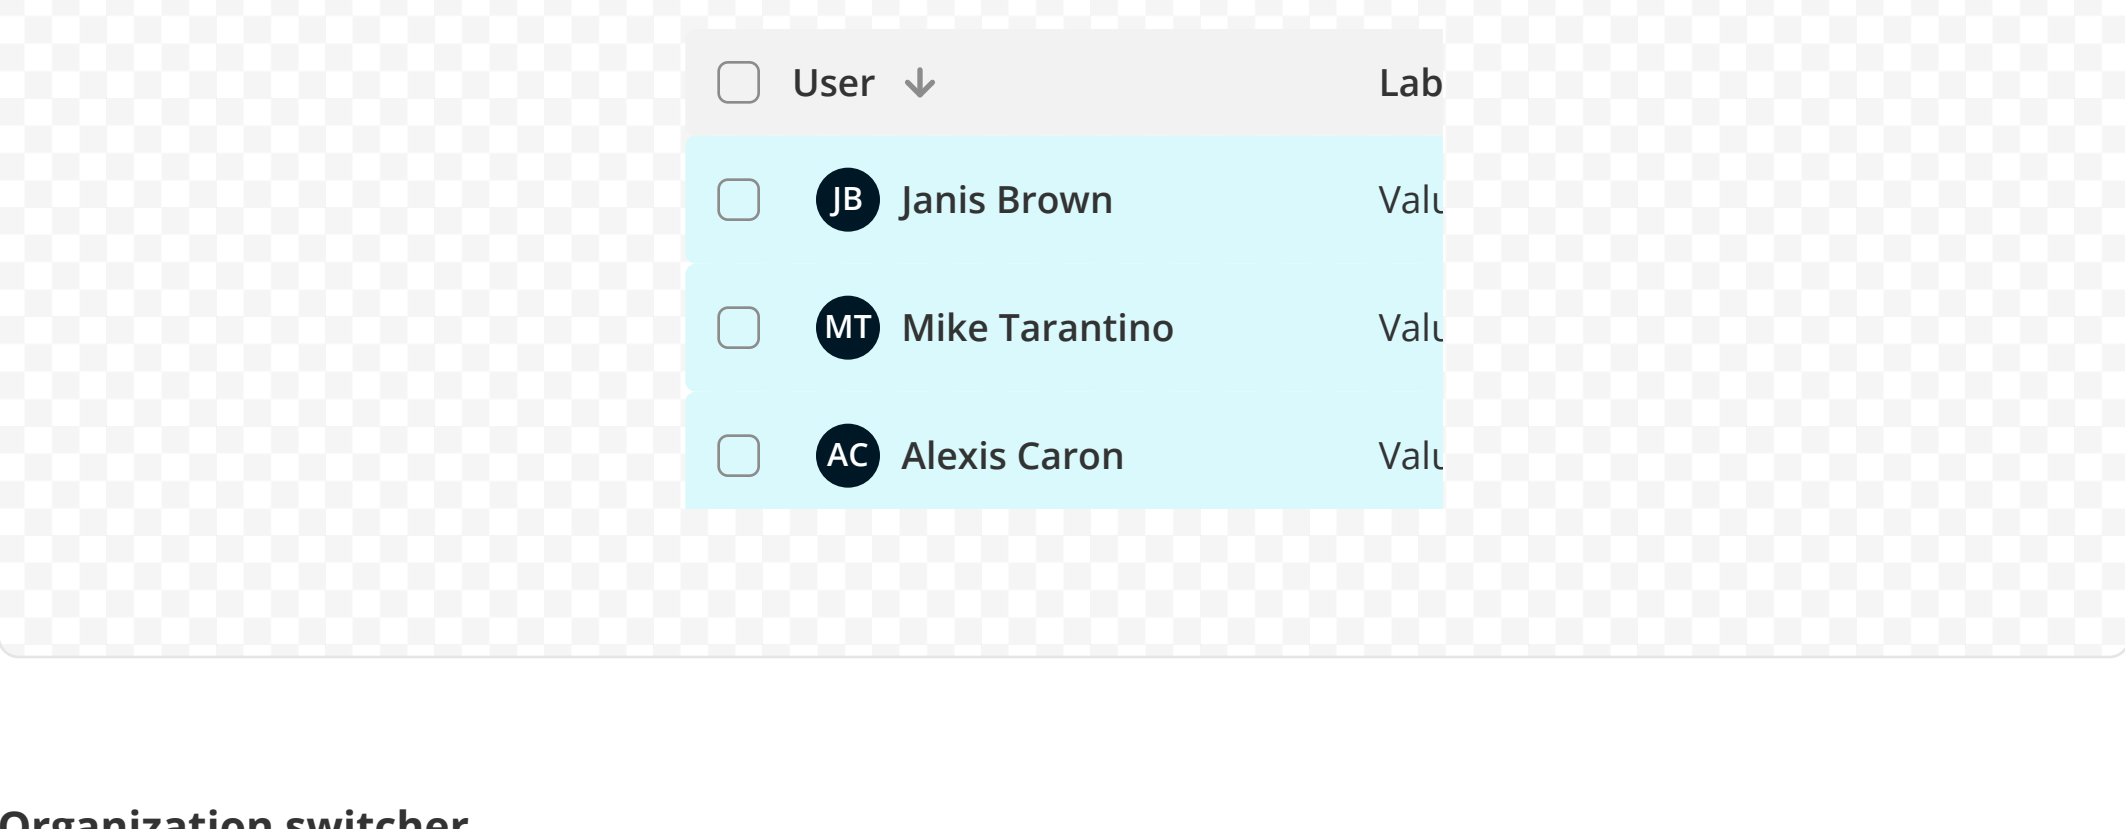

With avatar

Resource items can contain, or not, an Avatar to help users identify quicker the item they are looking for.

Use cases

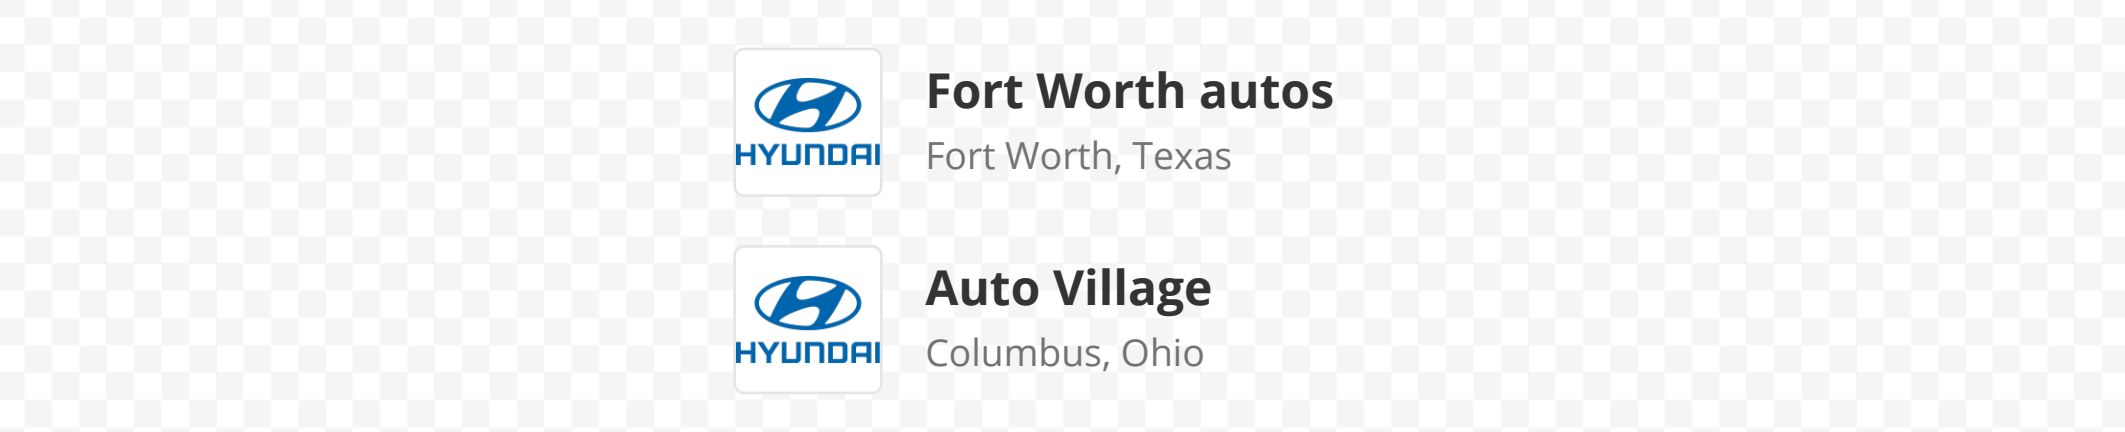

Small item in a Data table

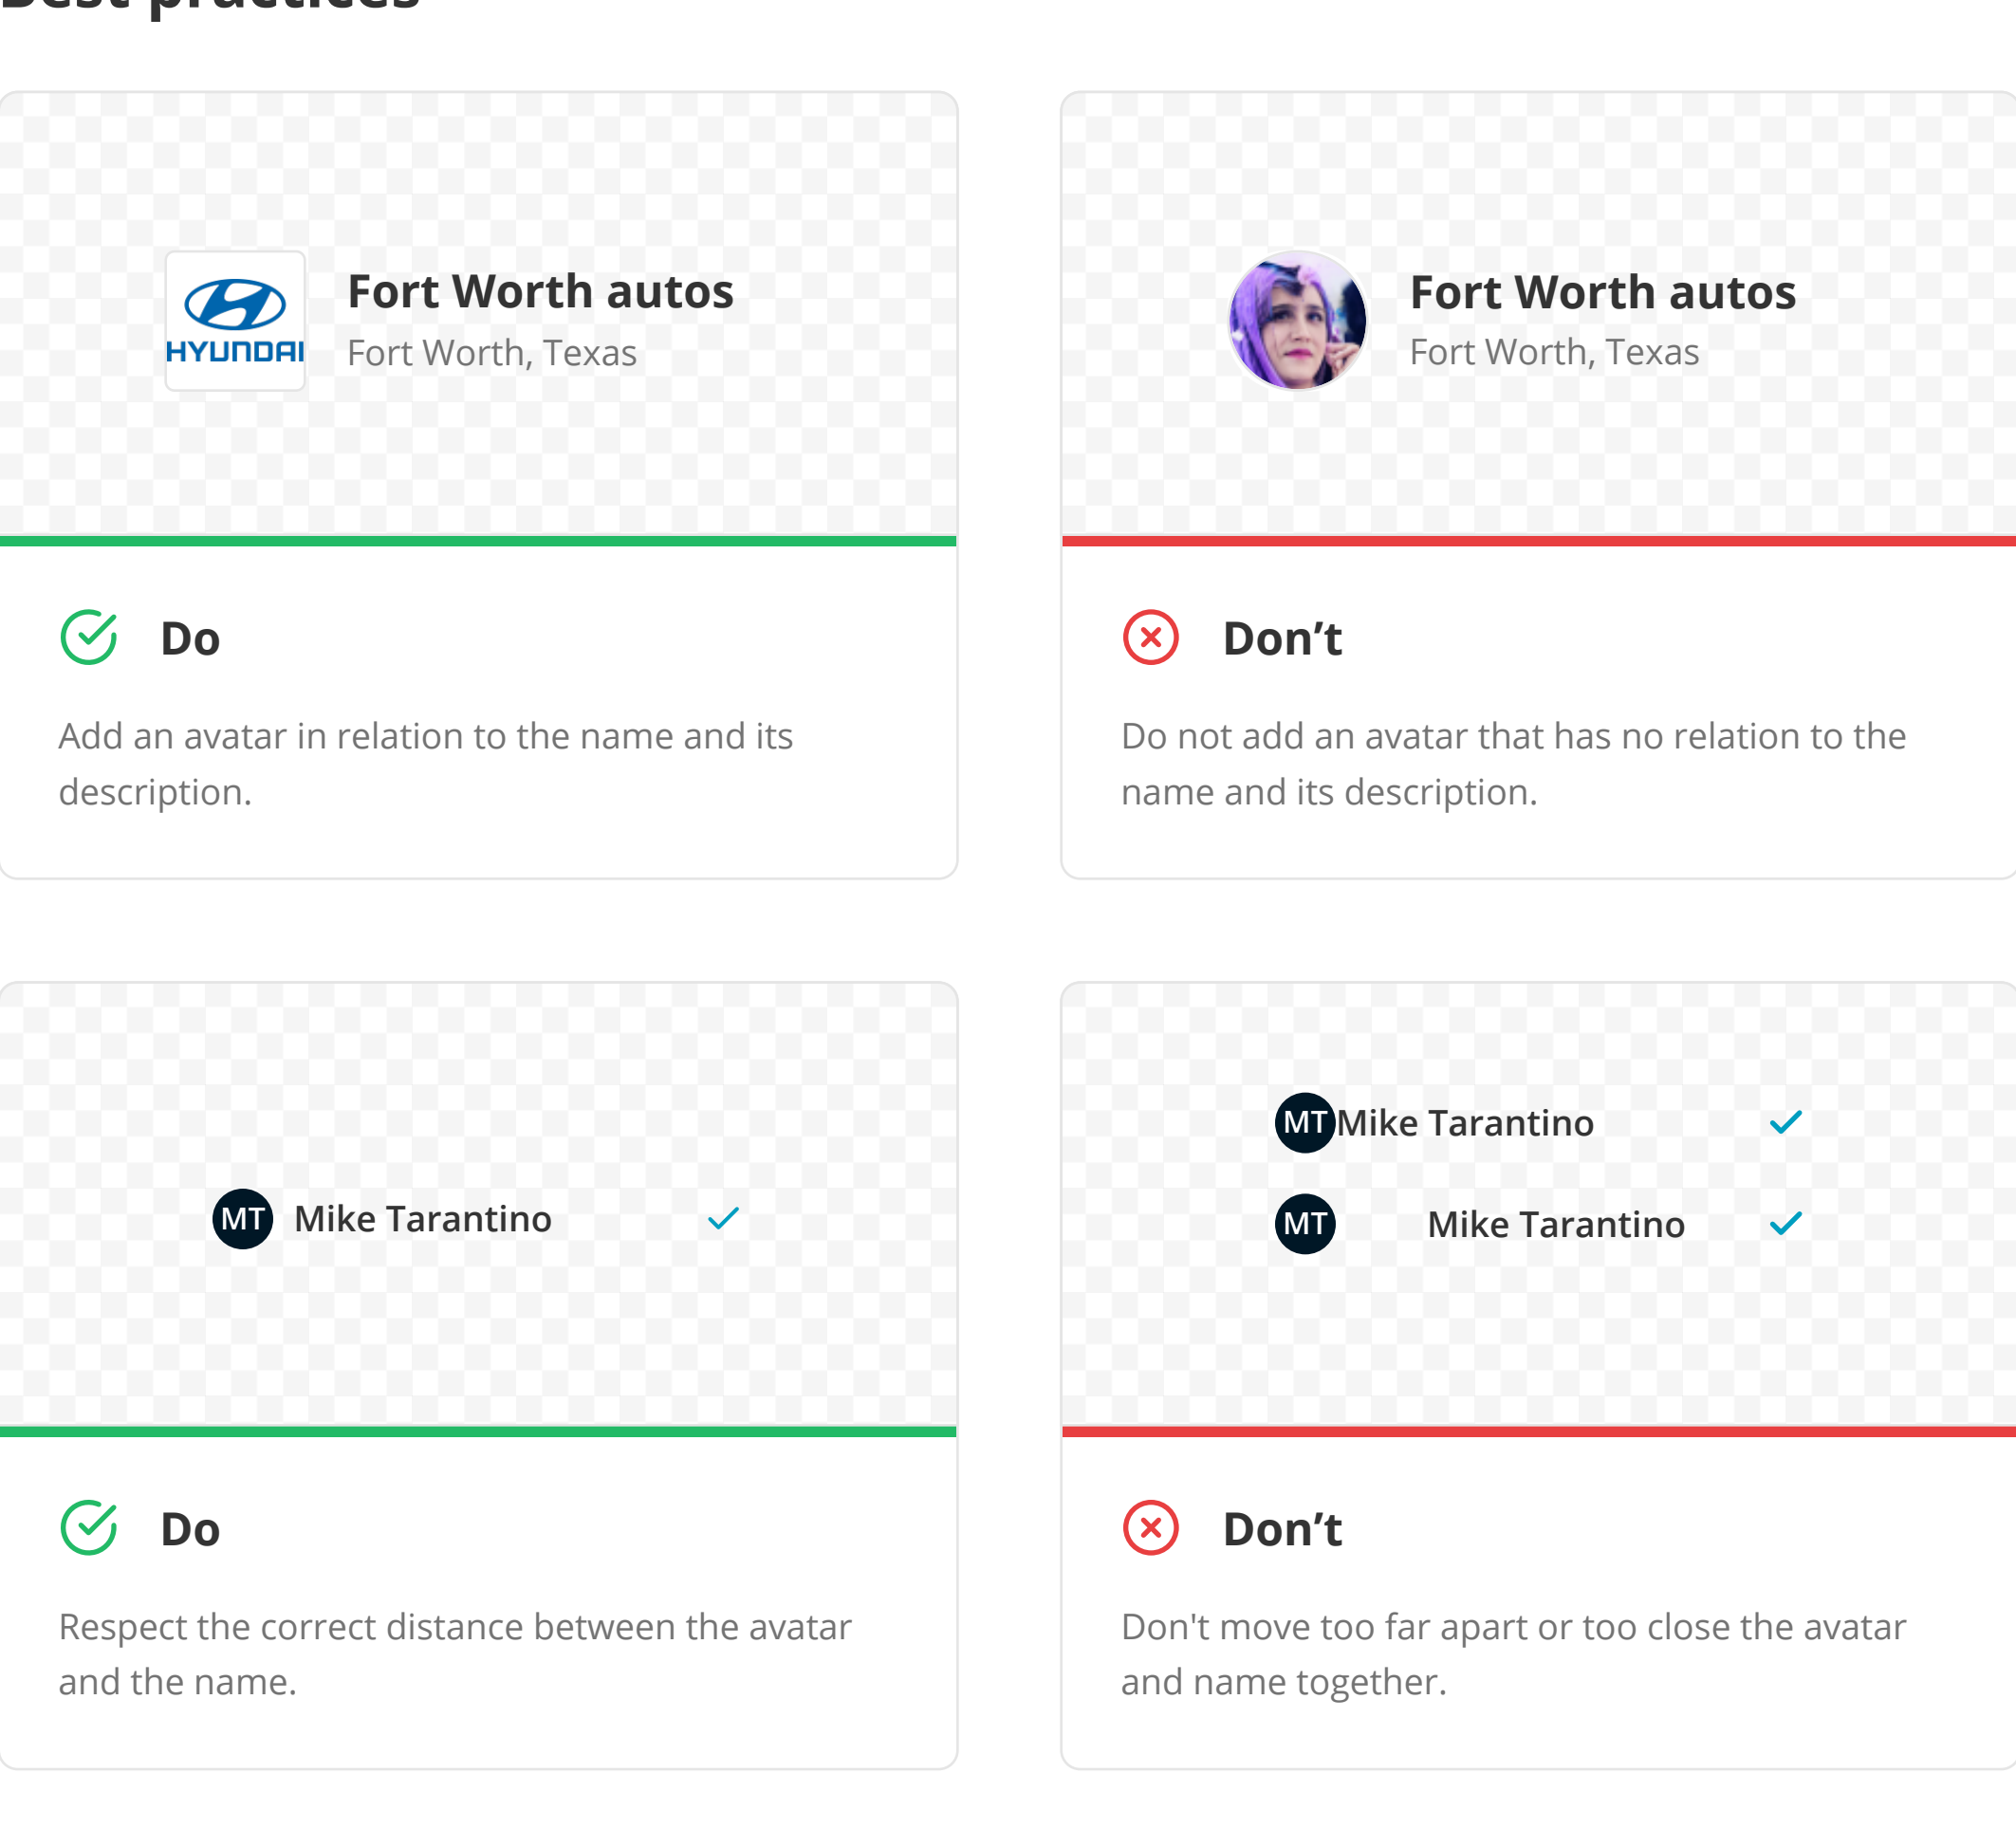

Organization switcher

Store items

Best practices

Accessibility

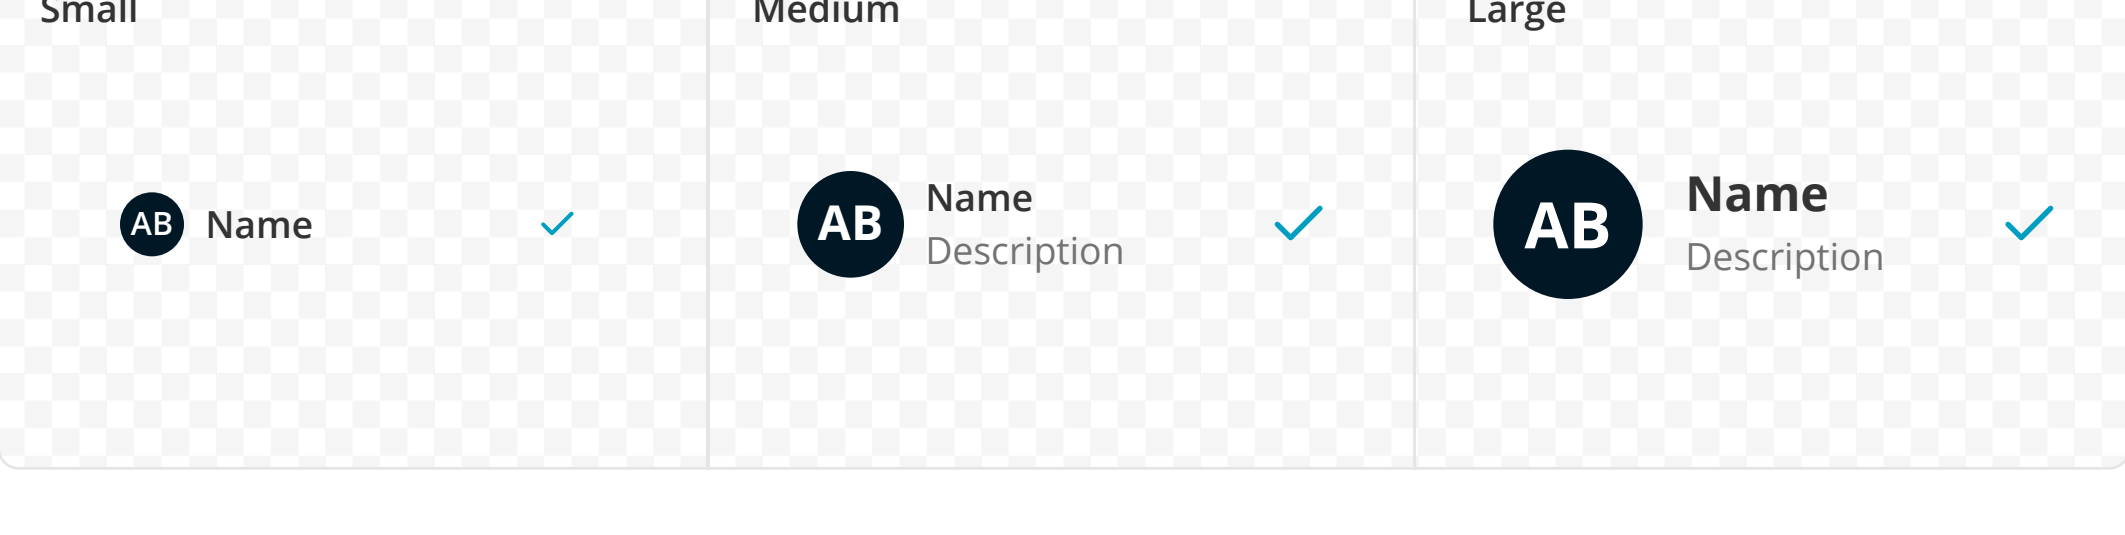

Must respect the contrast minimum ratio in order to be perceivable by all the users. As for a classic button, the ressource item component must be keyboard accessible to allows the keyboard selection. Apply a description, when it's possible, can help to give a complementary information and help users to better understand the context.
